User and ChatGPT discussed issues related to a PyQt5 IPTV application:

- Ensuring playlist is not loaded automatically in guest mode.

- Preventing leftover state from logged-in sessions after logout.

- Implementing a reliable login check at startup.

- Properly using `self.logged_in` to control playlist loading.

- Avoiding redundant variables like `self.login_checked`.

- Fixing EPG window titles and menu ordering.

- Ensuring "No User Registered" mode behaves consistently.

Actionable changes included:

- Adding checks at the top of `load_playlist_from_url`, `load_playlist_from_path`, and `load_playlist` using `self.logged_in`.

- Cleaning up `check_login()` to only set playlist state on success.

- Refactoring `reset_to_logged_out_state()` to clear UI and stop playback.

- Fixing menu duplication and ordering in `build_playlist_menu()` and `init_ui()`.

Next steps: User plans to continue later and will resume with this PDF.
